

## **Glossary, Research Data, and Technical Resources**

All sites are Geo-referenced. Data is stored on an ArcGis data base hosted and maintained at Stanford University.

An interactive site database is planned. The database shows for each site:

- Period(s) during which the site was occupied
- Cultures of the site occupants throughout time
- Data Sources and Reference Citations
- comments

Maps shown on the home page are edited for ease of use.

Additional data, such as site names,... can be seen on [linked](#) maps.

[links](#) to additional information and images for researchers are provided when more data is available.
